Smart Furniture Products

Smart Home is no longer a buzzword but a reality. Intelligent lights, networked fire detectors or web-connected surveillance cameras are even available at food discounters. Although many of us have concerns about privacy and security, a recent Deloitte study shows that the spread of smart home components continues to increase.

Smart furniture

Smart Home is on everyone's lips - but so far there has been little talk of intelligent furniture. This will change, of course, because thanks to digitalization, tables, sofas and the like can also offer added value. In this blog post you can read about the challenges facing furniture manufacturers and what Smart Furniture looks like in concrete terms.
